- **SCART out:** CVBS out, Audio L+R out

Product highlights

Watch any device on a 2nd TV

The wireless link uses standard SCART and cinch plugs that are used by almost every brand of audio/video devices. If your device has one of these standard connectors it works with the wireless link.

Works with DVD and many more

Extend your possibilities for viewing movies, sports events, live performances and a range of TV channels anywhere in your home. The wireless TV link is suitable for transmission of AV content of all brands of PayTV and Pay-per-View decoders, satellite receivers, set-top boxes, DVD players, VCRs and camcorders.

Works on almost all brands

The wireless link uses standard SCART and cinch plugs that are used by almost every brand of audio/video devices.

Operates in closed cabinet

If you store your audio/video devices in a cabinet, you cannot operate these devices with a normal IR remote control. The Philips wireless remote control link allows you to operate these devices with the cabinet doors closed thanks to an RF-based link that picks up the infrared signals of a remote control and translates them into RF. The receiver unit then translates them back to IR.

Wireless means no drilling

A 2.4 GHz wireless link between the receiver and transmitter means you don't have to lay cables or drill holes through walls.

Wireless goes through walls

There's no need to buy or rent duplicate A/V equipment. The wireless RF system extends your possibilities for viewing DVD movies and your favorite Satellite or TV channels anywhere in your home. With a range of up to 30 meters inside the house, it delivers high-quality video and stereo audio no matter where your second TV is located.
